

## 2008 FOCUS Drug Formulary and Pharmacy Benefit Guidelines

The **Universal Rx** Focus Drug Formulary defines the copayment tier status of the medicines most commonly prescribed for Universal Rx members. It may not include all drugs covered by your prescription drug benefit. For benefit coverage or restrictions please check your benefit plan document(s). This listing is revised from time to time as new drugs and new prescribing information becomes available.

The coverage tier for each medication has been indicated. Members pay a Tier 1 copay for most generic drugs and selected OTC medicines. Members pay a Tier 2 copay for higher cost generic drugs and formulary ("preferred") brand name drugs. Members pay a Tier 3 copay for non-formulary and highest cost brand name drugs.

It is recommended that you have this list of medications available when you are with your physician and a prescription drug is going to be part of the treatment for a clinical condition.

### Key to Notations:

**PA:** Prior authorization to ensure clinical appropriateness of this or previous therapy with other similar medications may be needed before claims for one of these medications will be accepted.

**ST:** A step therapy protocol is in place for this medication. Claims for this medication may be covered based on the enrollee's previous medication history. If prior medication history does not meet clinical guidelines, authorization may be required prior to acceptance of claims.

**QL:** Quantity limitations (maximum number of tablets/capsules, etc. per month or year) are in place for this medication.

**SPECIALTY DRUGS**

Coverage for "Specialty Drugs" varies from plan to plan. Your prescription benefit may not cover some or all of these items. Please check your pharmacy benefit information if you have questions.

Specialty Drugs are "bioengineered" oral or injectable medicines that target and treat complex medical conditions including: blood disorders, cancers, infertility, hormone or enzyme deficiencies, multiple sclerosis, rheumatoid arthritis, and a growing list of obscure or "orphan" diagnoses.

Specialty drugs are complex compounds and some have unique "handling" requirements. The FDA in selected situations has required dispensing from a single pharmacy or a limited set of "approved" pharmacies. Some "specialty" drugs are oral tablets or capsules while others require injection. The result is that many drugs can be distributed directly to patients, while others will be sent to physicians or home health companies or other professional settings for administration.

Most plan sponsors will apply "step edits" or prior authorization criteria prior to the dispensing or administration of a specialty drug. These requirements ensure appropriate use of a specialty drug.
